## About IRENA

The International Renewable Energy Agency (IRENA) is an intergovernmental organisation that supports countries in their transition to a sustainable energy future, and serves as the principal platform for international co-operation, a centre of excellence, and a repository of policy, technology, resource and financial knowledge on renewable energy. IRENA promotes the widespread adoption and sustainable use of all forms of renewable energy, including bioenergy, geothermal, hydropower, ocean, solar and wind energy, in the pursuit of sustainable development, energy access, energy security and low-carbon economic growth and prosperity. ## NOTES TO THE TABLES

The renewable power capacity data shown in these tables represents the maximum net generating capacity of power plants and other installations that use renewable energy sources to produce electricity. For most countries and technologies, the data reflects the capacity installed and connected at the end of the calendar year. Pumped storage is included in total capacity but excluded from total generation. The capacity data are presented in megawatts (MW) and the generation data are presented in gigawatt-hours (GWh). All the data are rounded to the nearest one MW/GWh, with figures between zero and 0.5 shown as a 0. In the balances, renewable electricity trade is calculated based on the share of renewables in total production. There are instances where there are no matching capacity/production values. This is due to several factors such as no electricity production for that period for that technology; and multiple fuel sources for power generation at certain facilities.

Data have been obtained from a variety of sources, including: the IRENA questionnaire; official statistics; industry association reports; and other reports and news articles. Numbers followed by the letter "o" are figures that have been obtained from official sources such as national statistical offices, government departments, regulators and power companies. The letter "u" follows figures that have been obtained from unofficial sources, such as industry associations and news articles. The letter "e" follows figures that have been estimated by IRENA from a variety of different data sources. All figures from the IRENA questionnaire are presented without any indicator.

The Public Renewable Energy Finance Flows shown in these tables present an overview of investment transactions for renewable energies from selected public financial institutions. The numbers are aggregated for each country and technology, based on the project level information. The data is presented in million United States Dollars (USD million) at current prices, rounded to the next 1 million, with figures between zero and USD 0.5 million shown as 0. The data have been obtained from a variety of publicly available sources.

Data are available for download at [www.irena.org/statistics](http://www.irena.org/statistics).

## NOTES À PROPOS DES TABLEAUX

Les données sur les capacités électriques renouvelables présentées dans ces tableaux représentent la capacité maximale nette de génération des centrales électriques et autres installations utilisant des sources d'énergie renouvelables pour produire de l'électricité. Pour la plupart des pays et technologies, les données reflètent la capacité installée et connectée à la fin de l'année civile. Accumulation par pompage est inclus dans la capacité totale, mais exclu de la production totale. Les données de capacité sont exprimées en megawatts (MW) et les données de production sont présentés dans gigawatt-heures (GWh). Toutes les données sont arrondis à l'unité la plus proche ; les valeurs inférieures à 0,5 apparaissent comme 0. Dans les bilans, les échanges d'électricité renouvelable est calculée sur la base de la part des énergies renouvelables dans la production totale. Il existe des situations où les valeurs de capacité électrique ne correspondent pas avec celles de la production. Cela s'explique par plusieurs facteurs, tels que l'absence de production électrique sur cette période et pour cette technologie, ainsi que l'utilisation de multiples sources de combustible pour la production de certaines installations.

Les données viennent de nombreuses sources incluant : le questionnaire IRENA ; les statistiques officielles ; des rapports d'associations de l'industrie ; et d'autres rapports et articles de presse. Les valeurs suivies de la lettre "o" ont été obtenues à partir de sources officielles (par exemple instituts statistiques nationaux, agences gouvernementales, régulateurs, compagnies d'électricité). La lettre "u" suit les valeurs venant de sources non officielles comme des rapports d'associations de l'industrie ou articles de journaux. La lettre "e" suit les valeurs qui ont été estimées par l'IRENA à partir de sources diverses. Toutes les données venant du questionnaire IRENA sont présentées sans indication.

Les données sur les flux financiers publics pour les énergies renouvelables présentées dans ces tableaux donnent une vue d'ensemble des transactions d'investissement pour les énergies renouvelables selon des institutions financières publiques sélectionnées. Les chiffres sont agrégés pour chaque pays et par technologie, sur la base de l'information disponible au niveau du projet. Les données sont exprimées en millions de dollars américains (USD millions) à prix courants, avec un arrondissement au million; les valeurs inférieures à 0.5 millions apparaissent comme 0. Les données ont été collectées selon des sources disponibles publiquement.

Les données sont téléchargeables sur le site [www.irena.org/statistics](http://www.irena.org/statistics).

## NOTAS A LAS TABLAS

Los datos de capacidad de generación eléctrica con energías renovables que se muestran en estas tablas representan la capacidad máxima de generación neta de las centrales eléctricas y otras instalaciones que utilizan fuentes de energías renovables para producir electricidad. Para la mayoría de los países y las tecnologías, los datos reflejan la capacidad instalada y conectada al final del año natural. Hidroeléctrica de bombeo pura se incluye en la capacidad total, pero excluidos de la generación total. Los datos de capacidad se presentan en megavatios (MW) y los datos de generación se presentan en gigavatios·hora (GWh). Todos los datos se redondean al MW/GWh entero más cercano, con cifras entre cero y 0.5 representadas como un 0. En los balances, el comercio de electricidad renovable se calcula en base a la proporción de energías renovables en la generación total. En ciertos casos, los valores de capacidad/producción no coinciden. Esto se debe a varios factores, como la falta de producción de electricidad durante ese período para dicha tecnología, y la existencia de múltiples fuentes de combustible para la generación de energía en determinadas instalaciones.

Los datos se han obtenido a partir de una variedad de fuentes, incluyendo: el cuestionario de IRENA; estadísticas oficiales; informes de las asociaciones industriales; y otros informes y artículos de noticias. Los números acompañados de la letra “o” son cifras que se han obtenido a partir de fuentes oficiales, como oficinas nacionales de estadística, departamentos gubernamentales, reguladores y compañías eléctricas. La letra “u” acompaña a cifras que se han obtenido a partir de fuentes no oficiales, tales como asociaciones industriales y artículos de noticias. La letra “e” acompaña a números que han sido estimados por IRENA a partir de diversas fuentes de datos. Todos los datos provenientes del cuestionario de IRENA se presentan sin ningún indicador.

Los datos de los flujos de financiación pública en energías renovables que se muestran en estas tablas presentan una visión general de las transacciones de inversión en energías renovables de las instituciones financieras públicas seleccionadas. Los datos están agregados por país y tecnología, y provienen de información a nivel de proyecto. Los datos se presentan en millones de dólares estadounidenses (USD millones) a precios corrientes, redondeado al millón entero más cercano, con cifras menores de 0.5 millones representadas como un 0. Los datos se han obtenido a partir de diversas fuentes públicas.

Los datos están disponibles para su descarga en [wwwIRENA.org/statistics](http://wwwIRENA.org/statistics).
